movie in tamil hd 108098 Q:  
How can I invoke function  
with arguments which  
returns true in javascript  
How can I invoke function  
with arguments which  
returns true in javascript. For  
example function a(b,c){  
return false; } function b(c){  
return true; } I want to  
invoke function a with

---

arguments which returns true, like below code. var c = a(b(), c); What I want to do is to return true or false as a result of function a. A: You could use a separate function: function a(b, c) { return b(c); } function b(c) { return c instanceof Array; } function a(b, c) { return b(c); } You can call it like: var c = a(b(), c); Note that this function doesn't return true

---

or false, but whatever the b(c) function returns. Q: How to convert Iterable to ArrayList Is there a way to convert Iterable to ArrayList? As I don't want to allocate more memory than is necessary. Something like : Collections.asArrayList(Iterable) A: No. The problem is that the type of Iterable is covariant: interface Iterable extends Collection Thus,

---

there is no guarantee that a Collection is a subclass of Iterable. As such, there's no way to enforce this.

1. Field of the Invention The present invention relates to a method of manufacturing a semiconductor device, and, in particular, to a technique for forming an interlayer dielectric film formed on a semiconductor substrate.
2. Description of the Related

---

Art Conventionally, to prevent or reduce a short-circuit of contact plugs formed between different wiring layers in the manufacture of semiconductor devices, in some cases, an interlayer dielectric film formed on a semiconductor substrate is planarized in a step called as a chemical mechanical polishing (CMP) process.
