Cerambycidae)]. Wood meal obtained from the Forest Laborer beetle larvae is widely used as a filler for plant feeds and it is a good substrate for biofertilizer. However, the use of this material is limited by its high water content. Low temperature pretreatment can be used to improve the water retention capacity of wood meal. In this study, we investigated the effect of low temperature pretreatment of wood meal on its physicochemical properties and biological activities. The results

generation of films is usually experimental or of a more creative nature, more personal than the commercial classicism of the 90s and early 2000s. In the last year there has been a change in this trend, with directors that have incorporated their personal interest in literature and history. These include “Gomorra”, “Juan Antonio Bardem”, “The Skin I Live In”, “A Hijo de puta”, “Ernesto Cañellas”, “Raja y su libro”, “Vergiss mi nombre”, “Melancholia”, “A francesa”, “The Lion”, “More than a
