HTTP Analyzer is a useful tool for debugging or checking HTTP responses. It can be used to detect and trace bad HTTP responses, determine all hosts that responded to a request, etc. You can even turn off specific responses for an IP address or hostname. Also, you can monitor HTTP traffic with additional information, like the source IP and HTTP method, total response times and links. This information is also saved to XML files. Note: HTTP Analyzer offers a lot of features, but it will not open any webpages. It just looks for specific response codes. In addition, this can only be achieved with the FTP module. Get to know what the Internet is really about and take your understanding to a whole new level with your browser and internet explorer, no matter where you are. The combination of Internet Explorer and the built in FireFoxBits for internet explorers is a must for everyone who wants to explore and browse the web. Your browser can be navigated with the controls at the top of the screen or with the keyboard. Left clicking on a link or image will open it in the browser and the right click will open the context menu. Try all new Internet Explorer 9 features today. You can get to know what the Internet is really about and take your understanding to a whole new level with your browser and internet explorer, no matter where you are. What's New In HttpAnalyzer?

HttpAnalyzer is an easy to use application designed to automate Http-requests for example all browser activities can be logged / written to XML-formated files and redone by using simple methods. The records can be saved as text files, or saved to various database files. You can run the HttpAnalyzer by entering the URL of the website you want to analyze or using a URL for example "google.com". the program shows you what time the process was started and the IP adress the process was started from. The IP is shown in a black box. It gets cleared when you change the IP. The date and time gets entered in the XML file, for the next time you want to do an analysis. You can also see that the usage of space by the application. Main features of HttpAnalyzer: - Analyze a URL with HttpAnalyzer and get some information about the page. - Show you all pages the user visits, and you can save a list to an XML-file. - The text files can be saved to a directory. - HTML files can be saved to a directory. - A window pops up when you press the right mouse button, so you can see what's going on. - Check if the page is working by going to the same page again after you've saved the page to a text file. - You can use a Proxy. - HttpAnalyzer now also shows you all requests to the server the same way it shows you the IP and the date and time it was started. - Now you can choose to save HttpAnalyzer.exe to your computer, so you can always start the application from there. - Now HttpAnalyzer shows the usage of memory by the application (Internet Explorer). - You can get the date and time when the last successful transfer to the server was and when the program was started and the IP used. - You can now save all HTML files that you find interesting. - You can choose what to save the file with (HTML or TXT). - You can now check if the page is working, by going to the same page again after you've saved the page to a text file. - Now you can specify a list of websites to analyze. - You can now set a fixed IP, and have HttpAnalyzer detect it automatically for you. - Check to see if the website you want to analyze is working with HttpAnalyzer. - Now the program shows you the date and time the page was analyzed and the IP that was used. - If the webpage you want to analyze is slow, then you can now choose to pause the analysis of the webpage. - You can now choose to display

System Requirements For HttpAnalyzer:

Recommended specs: Verdict: This is one of those games that you should play if you're interested in the whole survival genre because it does have a lot of nice little touches. Overall, what's really good about this game is that there are a lot of survival elements to it, such as clearing the land and building shelters. The technology system is also really cool and adds a nice bit of flavor to the whole experience. The game is all about the characters and the story but it feels a little hollow at times. It's
