TAGS – Many objects in AutoCAD contain a separate file with information about the object. A file with objects is called a TAGS (or a TAG) file, and can be placed in any folder. TAGS files contain attribute information about the drawing objects (attributes), and are used to control the objects and display information about them in an interface. TEMPORARY – An object that you make changes to, but that does not appear in the drawing until you apply those changes. TEMPLATE – A file, often a series of components, that you can use to create a drawing. You can create your own templates. Templates are added to the Templates dialog box. You can store templates as XML files. You can store them as a template package. TEMPORARY OBJECTS – Objects that you create and change temporarily to test a drawing before you apply those changes to a drawing. In the 2D edition, AutoCAD contains a command line tool (AutoLISP) for automation of the program. This was superseded by ObjectARX in the 3D edition. An earlier scripting language was Visual LISP, which is no longer supported and has been deprecated. AutoLISP, the 2D command line version of the language, remains available as a standard component of AutoCAD. Also, ObjectARX is available as a standard component in AutoCAD, as is the Script Component in AutoCAD Architecture. AutoCAD contains a command line tool for automation of the program, named AutoLISP. This was replaced by the ObjectARX automation system which is part of the standard install of AutoCAD 3D. AutoCAD's DXF (Drawing Exchange Format) file format allows importing and exporting drawing information. AutoCAD also supports native drawing exchange, which allows the drawing format and content of an AutoCAD drawing to be automatically converted to a native CAD exchange format.
