Gone are the days when everyone used to keep his/her personal files and documents in the same folder. Today, people prefer using different folders to organize their data, and when it comes to this, file2folder GUI is the right tool for the job. Through its intuitive interface, you can easily convert multiple files and folders into their respective subfolders, and for a good reason: not only does it enable you to organize your data as per your requirements, but you can also store multiple file copies. Once you have selected the destination folder, you will be presented with a window where you can find an option to select multiple files and move them to the target folder. For each file selected, you can use the up/down buttons to move it to the next available location. The same logic applies to folders, and you can choose how many subfolders you want to have by clicking the checkboxes next to each of them. Once you are done making your changes, simply click on the 'Convert' button to proceed with the process. An important note is that file2folder GUI will not be able to create folders if some with identical names already exist, so you will have to take care of that on your own. Also, in case you have files of different extensions but bearing the same name, they will all be transferred into the same folder, so it is more easy to locate them. Easy to use and quick in processing, file2folder GUI can be a good solution for those who want to have their files kept in individual directories bearing the same name as the contained documents. Features: Create subfolders in the target directory. Convert multiple files and folders to new folders with the same names. Select multiple files and move them to the target folder. Select multiple folders and
