The technology also captures player height, speed, strength, and body types as an important reference for physics and animation. FIFA 2122 also uses motion capture data captured from real-life players to recreate player animations. For more information on how “HyperMotion Technology” works, check out the feature below: The Frostbite Engine is used in conjunction with the FIFA engine for FIFA 2122. With this combination of technology, FIFA 2122 is an all-new game engine for all players, allowing for more realistic movements, animations, and ball physics, delivering a brand-new soccer experience. “We’ve been working closely with the FIFA community to redesign the game engine, from the data and physics feedback we've

received,” said Andreas Nilsson, Senior Producer, FIFA 2122. “We are making a game that feels more authentic, using motion capture and the Frostbite engine to simulate and recreate the beauty of the game.” The PES 2018 engine is equipped with dynamic Finesse Grid technology and “FIFA simulation tech” for more advanced AI and player intelligence. The Frostbite Engine was selected for PES 2018 development after the FIFA team tested the engine for eight months. “We’ve been working closely with the PES development team for two years,” said Timo Blomqvist, Senior Producer, PES 2018. “We’ve incorporated a number of things they’ve asked for, in order to better represent the speed of the game, match flow, team-mate information, ball control, and more.” In addition to the physics and animation overhauls, PES 2018 also introduces the “UEFA National Team Kits” feature which features real-life kits of 52 UEFA national teams. It allows players to be shown in actual kits during game play, and allows you to customise the 22 jersey customization options on the new PES 2018 Ultimate Team game mode. When it comes to gameplay, PES 2018 allows for over-the-top game play, improved ball control, and advanced ball movement for advanced

players. With PES 2018, a number of game modes, enhancements, and new features are incorporated. “Every movement is goal-oriented, and the big focus areas are defending and attacking,” said Timo Blomqvist, Senior Producer, PES 2018

What's new in Fifa 22:

- **FIREFACILITIES** Meet the newest collection in FIFA, the FIREFACILITIES containing items and kits you can use to add-interesting and unique tactical features to your football match.
- **GAMERA PICKER** One of the core elements of the new FIREFACILITIES is the ability to equip any player in the game with furniture, which can alter the way a player plays and is obtained, as it can affect three core components: dribbling, passing and shooting.
- **FIREFACILITIES CAN BE BOUGHT ONE BY ONE** Although the core components of furniture are constant between all items, every single one is equipped with its unique set of gameplay effects, which are affected by combinations of items. Start levelling up your favourite player, and kit them out with the best players and the best kits
- **BETAMOMETER** The BETAMOMETER uses a technique called Time-to-Impact to calculate a player's physicality, dribbling and passing skill in real time. Use the system to predict future events and make smart decisions.
- **DEVELOPMENT PEGI** leads the charge for all game development, as the ESRB and PEGI work together to create more accurate content descriptions for every game on the market. We go beyond traditional content descriptors, and ensure that the latest version of the game reflects exactly what occurs during a simulated match!
- **GAMEPLAY PATCHES** If you have an existing save file for FIFA 21, you can load it into FIFA 22. We've done a lot of listening and diving into your feedback, and have implemented gameplay changes based on the real-world events that occur in a match. We've also come up with new ways to play and new graphical improvements and changes, too.
- **The PLAYING FIELD** One of the most significant changes to the audio and visual style
